

Overview

The ImaginationGYM® Methodology is based on leading edge educational and cognitive theories with imagination at its core. It is designed to integrate with both formal and informal educational and childcare systems. It specifically targets individual life skills that are developed at primary age and will be essential tools as an adult in later life. For example, decision-making, problem solving, emotional intelligence, self-regulated behaviour and effective use of creativity and imagination.

ImaginationGYM® makes the assumption that all children are intelligent, all children want to learn and that all children are different.

ImaginationGYM® is designed to tap into the innate intelligences and learning styles of each individual child. The program's core design takes into account the stress and limited time/ resources of staff working with children. The quiet, calm atmosphere which the program creates encourages children to develop academic and life skills through creativity, while also benefiting staff.

The intensive research and development phase has been supported by a growing number of academics, psychologists and educational institutions worldwide and ImaginationGYM® is currently being integrated into the advanced childcare practices of Scandinavia.

Information

ImaginationGYM® Methodology Level One Training Course

for

Primary School Teachers

Date

Time

Venue

Fee*
